

BULLY BOXCAR PLUG DOOR OPENER

The Bully Boxcar Plug Door Opener is designed to open boxcar plug doors without the danger of physical stress to the operator. Operated from the seat of a forklift or similar fork device, the Bully power arm rotates the plug door handle from a stable platform in a predictable fashion. By handling stored energy from the recoil in the door's handle in a safe manner, it keeps the operator out of danger from the door.

Since the Bully is mounted to the front of a forklift, it also prevents the operator from falling between the dock and the railcar when trying to turn the handle.

In addition to the plug door opener, the Bully also contains an arm that can be extended to either side and used to push the boxcar door open or closed.

BENEFITS:

- Prevents operator injury
- Single-person operation
- Convenient DC power
- Meets OSHA standards
- Reduces downtime and increases productivity

FEATURES:

- Forklift mounted 3"x7" Fork Pockets
- Custom Fork Pockets are available on request
- DC battery over hydraulic power
- Built-in smart charger
- Plug door power arm rotates at about 20 RPM
- Extendable arm for pushing door open/closed
