

DR WINCH

BOXCAR SLIDING DOOR OPENER

Boxcar doors are not only difficult to open, but they can be dangerous, especially if the door is damaged or the load has shifted.

The DR Winch makes the tough job of opening sliding doors easy, and most importantly, safe. Two powerful winches enable the DR Winch to anchor itself to the boxcar while pulling the sliding door open. The winches use synthetic rope which is stronger than steel cable and will not whip or backlash if cut.

The long control cord or optional remote control allows the operator to be positioned safely out of harm's way during the entire opening or closing process.

BENEFITS:

- Prevents operator injury
- Prevents boxcar damage
- Single-person operation
- Meets OSHA standards
- Reduces downtime and increases productivity

FEATURES:

- Forklift mounted 3"x7" Fork Pockets
- Custom Fork Pockets are available on request
- DC battery power with built-in charger
- Double winches allow safe anchoring while opening the boxcar
- Synthetic rope will not whip or backlash
- Optional remote control available
